Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a file management system, users are required to provide a valid file name when creating new files. The system enforces specific rules for file names to maintain consistency and avoid potential issues. Your task is to implement a Java program named FileNameValidator that takes user input for a file name and validates it according to the specified rules.

Rules for Valid File Name:

The file name must consist of alphanumeric characters (letters and digits) only. The file name must have a minimum length of 3 characters.

Implement a custom exception, FileNameValidator, to handle cases where the entered filename does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired filename.

Output Format

The output is displayed in the following format:

If the entered file name meets the specified criteria, the program outputs

"Valid file name"

If the entered file name does not meet the criteria and triggers the `InvalidFileNameException`, the program outputs

"Error: Invalid file name. It must be alphanumeric and have a minimum length of 3 characters."

Refer to the sample output for formatting specifications.

Sample Test Case

Input: myfile123

Output: Valid file name

Answer

```
// You are using Java
import java.util.*;
class InvalidFileNameException extends Exception{
    public InvalidFileNameException(String m){
        super(m);
    }
}
public class Main{
    public static void main(String[]a){
        Scanner s=new Scanner(System.in);
        String f=s.nextLine();
        s.close();
        try{
            validateFileName(f);
            System.out.println("Valid file name");
        }catch(InvalidFileNameException e){
            System.out.println("Error: Invalid file name. It must be alphanumeric and have a
```

```
minimum length of 3 characters.");
```

```
}
```

```
static void validateFileName(String f)throws InvalidFileNameException{
```

```
if(f.length()<3||!f.matches("[A-Za-z0-9]+"))
```

```
throw new InvalidFileNameException("Invalid file name");
```

```
}
```

```
}
```

Status : Correct
